

Bash scripting cheatsheet

Introduction

This is a quick reference to getting started with Bash scripting.

Learn bash in y minutes

(learnxinyminutes.com)

Bash Guide

(mywiki.woledge.org)

Conditional execution

```
git commit && git push
git commit || echo "Commit failed"
```

Strict mode

```
set -euo pipefail
IFS=$'\n\t'
```

See: [Unofficial bash strict mode](#)

Example

```
#!/usr/bin/env bash
```

```
NAME="John"
echo "Hello $NAME!"
```

String quotes

```
NAME="John"
echo "Hi $NAME"    #=> Hi John
echo 'Hi $NAME'    #=> Hi $NAME
```

Functions

```
get_name() {
    echo "John"
}

echo "You are $(get_name)"
```

See: [Functions](#)

Brace expansion

```
echo {A,B}.js
```

<code>{A,B}</code>	Same as <code>A B</code>
--------------------	--------------------------

<code>{A,B}.js</code>	Same as <code>A.js B.js</code>
-----------------------	--------------------------------

<code>{1..5}</code>	Same as <code>1 2 3 4 5</code>
---------------------	--------------------------------

See: [Brace expansion](#)

Variables

```
NAME="John"
echo $NAME
echo "$NAME"
echo "${NAME}!"
```

Shell execution

```
echo "I'm in $(pwd)"
echo "I'm in `pwd`"
# Same
```

See [Command substitution](#)

Conditionals

```
if [[ -z "$string" ]]; then
    echo "String is empty"
elif [[ -n "$string" ]]; then
    echo "String is not empty"
fi
```

See: [Conditionals](#)

Parameter expansions

Basics

```
name="John"
echo ${name}
echo ${name/J/j}      #=> "john" (substitution)
echo ${name:0:2}      #=> "Jo" (slicing)
echo ${name::2}       #=> "Jo" (slicing)
echo ${name::-1}      #=> "Joh" (slicing)
echo ${name:(-1)}     #=> "n" (slicing from right)
echo ${name:(-2):1}   #=> "h" (slicing from right)
echo ${food:-Cake}    #=> $food or "Cake"

length=2
echo ${name:0:length} #=> "Jo"

See: Parameter expansion

STR="/path/to/foo.cpp"
echo ${STR%.cpp}      # /path/to/foo
echo ${STR%.cpp}.o    # /path/to/foo.o
echo ${STR%/*}        # /path/to

echo ${STR##*.}       # cpp (extension)
echo ${STR##*/}       # foo.cpp (basepath)

echo ${STR#*/}        # path/to/foo.cpp
echo ${STR##*/}       # foo.cpp

echo ${STR/foo/bar}   # /path/to/bar.cpp

STR="Hello world"
echo ${STR:6:5}       # "world"
echo ${STR: -5:5}     # "world"

SRC="/path/to/foo.cpp"
BASE=${SRC##*/}       #=> "foo.cpp" (basepath)
DIR=${SRC%$BASE}      #=> "/path/to/" (dirpath)
```

Substitution

<code>\${F00%suffix}</code>	Remove suffix
<code>\${F00#prefix}</code>	Remove prefix
<code>\${F00%%suffix}</code>	Remove long suffix
<code>\${F00##prefix}</code>	Remove long prefix
<code>\${F00/from/to}</code>	Replace first match
<code>\${F00//from/to}</code>	Replace all
<code>\${F00/%from/to}</code>	Replace suffix
<code>\${F00/#from/to}</code>	Replace prefix

Length

<code>\${#F00}</code>	Length of \$F00
-----------------------	-----------------

Default values

<code>\${F00:-val}</code>	\$F00, or val if unset (or null)
<code>\${F00:=val}</code>	Set \$F00 to val if unset (or null)
<code>\${F00:+val}</code>	val if \$F00 is set (and not null)
<code>\${F00:?message}</code>	Show error message and exit if \$F00 is unset (or null)
Omitting the <code>:</code> removes the (non)nullity checks, e.g. <code>\${F00-val}</code> expands to val if unset otherwise \$F00.	

Comments

```
# Single line comment

: '
This is a
multi line
comment
'
```

Substrings

<code>\${F00:0:3}</code>	Substring (position, length)
<code>\${F00:(-3):3}</code>	Substring from the right

Manipulation

```
STR="HELLO WORLD!"
echo ${STR,,}         #=> "hello world!" (lowercase 1st)
echo ${STR,,,}        #=> "hello world!" (all lowercase)

STR="hello world!"
echo ${STR^}          #=> "Hello world!" (uppercase 1st)
echo ${STR^^}         #=> "HELLO WORLD!" (all uppercase)
```

Loops

Basic for loop

```
for i in /etc/rc.*; do
  echo $i
done
```

Reading lines

```
cat file.txt | while read line; do
  echo $line
done
```

C-like for loop

```
for ((i = 0 ; i < 100 ; i++)); do
  echo $i
done
```

Forever

```
while true; do
  ...
done
```

Ranges

```
for i in {1..5}; do
  echo "Welcome $i"
done
```

With step size

```
for i in {5..50..5}; do
  echo "Welcome $i"
done
```

Functions

Defining functions

```
myfunc() {
  echo "hello $1"
}
```

Same as above (alternate syntax)

```
function myfunc() {
  echo "hello $1"
}
```

```
myfunc "John"
```

Returning values

```
myfunc() {
  local myresult='some value'
  echo $myresult
}
```

```
result="$(myfunc)"
```

Arguments

\$#	Number of arguments
\$*	All positional arguments (as a single word)
\$@	All positional arguments (as separate strings)
\$1	First argument
\$_	Last argument of the previous command

Raising errors

```
myfunc() {
  return 1
}
```

```
if myfunc; then
  echo "success"
else
  echo "failure"
fi
```

Note: `$@` and `$*` must be quoted in order to perform as described. Otherwise, they do exactly the same thing (arguments as separate strings).

See [Special parameters](#).

Conditionals

Conditions

Note that <code>[]</code> is actually a command/program that returns either 0 (true) or 1 (false). Any program that obeys the same logic (like all base utils, such as <code>grep(1)</code> or <code>ping(1)</code>) can be used as condition, see examples.	
<code>[] -z STRING []</code>	Empty string
<code>[] -n STRING []</code>	Not empty string
<code>[] STRING == STRING []</code>	Equal
<code>[] STRING != STRING []</code>	Not Equal
<code>[] NUM -eq NUM []</code>	Equal
<code>[] NUM -ne NUM []</code>	Not equal
<code>[] NUM -lt NUM []</code>	Less than
<code>[] NUM -le NUM []</code>	Less than or equal
<code>[] NUM -gt NUM []</code>	Greater than
<code>[] NUM -ge NUM []</code>	Greater than or equal
<code>[] STRING =~ STRING []</code>	Regex
<code>((NUM < NUM))</code>	Numeric conditions
More conditions	
<code>[] -o noclobber []</code>	If OPTIONNAME is enabled
<code>[] ! EXPR []</code>	Not
<code>[] X && Y []</code>	And

File conditions

<code>[] -e FILE []</code>	Exists
<code>[] -r FILE []</code>	Readable
<code>[] -h FILE []</code>	Symlink
<code>[] -d FILE []</code>	Directory
<code>[] -w FILE []</code>	Writable
<code>[] -s FILE []</code>	Size is > 0 bytes
<code>[] -f FILE []</code>	File
<code>[] -x FILE []</code>	Executable
<code>[] FILE1 -nt FILE2 []</code>	1 is more recent than 2
<code>[] FILE1 -ot FILE2 []</code>	2 is more recent than 1
<code>[] FILE1 -ef FILE2 []</code>	Same files

Example

```
# String
if [[ -z "$string" ]]; then
    echo "String is empty"
elif [[ -n "$string" ]]; then
    echo "String is not empty"
else
    echo "This never happens"
fi

# Combinations
if [[ X && Y ]]; then
    ...
fi

# Equal
if [[ "$A" == "$B" ]]

# Regex
if [[ "A" =~ . ]]

if (( $a < $b )); then
    echo "$a is smaller than $b"
fi

if [[ -e "file.txt" ]]; then
    echo "file exists"
fi
```

[[X || Y]]

Or

Arrays

Defining arrays

```
Fruits=('Apple' 'Banana' 'Orange')

Fruits[0]="Apple"
Fruits[1]="Banana"
Fruits[2]="Orange"
```

Operations

```
Fruits=("${Fruits[@]}" "Watermelon") # Push
Fruits+=( 'Watermelon' )              # Also Push
Fruits= ( ${Fruits[@]/Ap*/} )         # Remove by regex match
unset Fruits[2]                       # Remove one item
Fruits=("${Fruits[@]}")               # Duplicate
Fruits=("${Fruits[@]}" "${Veggies[@]}") # Concatenate
lines=(`cat "logfile"`)              # Read from file
```

Working with arrays

```
echo ${Fruits[0]}      # Element #0
echo ${Fruits[-1]}     # Last element
echo ${Fruits[@]}      # All elements, space-separated
echo ${#Fruits[@]}     # Number of elements
echo ${#Fruits}        # String length of the 1st element
echo ${#Fruits[3]}     # String length of the Nth element
echo ${Fruits[@]:3:2}  # Range (from position 3, length 2)
echo ${!Fruits[@]}     # Keys of all elements, space-separated
```

Iteration

```
for i in "${arrayName[@]}; do
  echo $i
done
```

Dictionaries

Defining

```
declare -A sounds

sounds[dog]="bark"
sounds[cow]="moo"
sounds[bird]="tweet"
sounds[wolf]="howl"

Declares sound as a Dictionary object (aka associative array).
```

Working with dictionaries

```
echo ${sounds[dog]} # Dog's sound
echo ${sounds[@]}   # All values
echo ${!sounds[@]}  # All keys
echo ${#sounds[@]}  # Number of elements
unset sounds[dog]   # Delete dog
```

Iteration

Iterate over values

```
for val in "${sounds[@]}; do
  echo $val
done
```

Iterate over keys

```
for key in "${!sounds[@]}; do
  echo $key
done
```

Options

Options

```
set -o noclobber # Avoid overlay files (echo "hi" > foo)
set -o errexit   # Used to exit upon error, avoiding cascading errors
set -o pipefail  # Unveils hidden failures
set -o nounset   # Exposes unset variables
```

Glob options

```
shopt -s nullglob # Non-matching globs are removed ('*.foo' => '')
shopt -s failglob # Non-matching globs throw errors
shopt -s nocaseglob # Case insensitive globs
shopt -s dotglob   # Wildcards match dotfiles ("*.sh" => ".foo.sh")
shopt -s globstar  # Allow ** for recursive matches ('lib/**/*.rb' => 'lib/...')
```

Set GLOBIGNORE as a colon-separated list of patterns to be removed from glob matches.

History

Commands

<code>history</code>	Show history
<code>shopt -s histverify</code>	Don't execute expanded result immediately

Operations

<code>!!</code>	Execute last command again
<code>!!:s/<FROM>/<TO>/</code>	Replace first occurrence of <FROM> to <TO> in most recent command
<code>!!:gs/<FROM>/<TO>/</code>	Replace all occurrences of <FROM> to <TO> in most recent command
<code>!\$:t</code>	Expand only basename from last parameter of most recent command
<code>!\$:h</code>	Expand only directory from last parameter of most recent command

Expansions

<code>!\$</code>	Expand last parameter of most recent command
<code>!*</code>	Expand all parameters of most recent command
<code>!-n</code>	Expand nth most recent command
<code>!n</code>	Expand nth command in history
<code>!<command></code>	Expand most recent invocation of command <command>

Slices

<code>!!:n</code>	Expand only nth token from most recent command (command is 0; first argument is 1)
<code>!^</code>	Expand first argument from most recent command
<code>!\$</code>	Expand last token from most recent command
<code>!!:n-m</code>	Expand range of tokens from most recent command

!! and !\$ can be replaced with any valid expansion.

!!:n-\$ Expand nth token to last from most recent command

!! can be replaced with any valid expansion i.e. !cat, !-2, !42, etc.

Miscellaneous

Numeric calculations

```
$(a + 200)      # Add 200 to $a

$($RANDOM%200)   # Random number 0..199
```

Inspecting commands

```
command -V cd
#=> "cd is a function/alias/whatever"
```

Trap errors

```
trap 'echo Error at about $LINENO' ERR

or

traperr() {
  echo "ERROR: ${BASH_SOURCE[1]} at about ${BASH_LINENO[0]}"
}

set -o errtrace
trap traperr ERR
```

Source relative

```
source "${0%/*}/../share/foo.sh"
```

Directory of script

Subshells

```
(cd somedir; echo "I'm now in $PWD")
pwd # still in first directory
```

Redirection

```
python hello.py > output.txt      # stdout to (file)
python hello.py >> output.txt      # stdout to (file), append
python hello.py 2> error.log       # stderr to (file)
python hello.py 2>&1                # stderr to stdout
python hello.py 2>/dev/null        # stderr to (null)
python hello.py &>/dev/null         # stdout and stderr to (null)
```

```
python hello.py < foo.txt          # feed foo.txt to stdin for python
```

Case/switch

```
case "$1" in
  start | up)
    vagrant up
    ;;

  *)
    echo "Usage: $0 {start|stop|ssh}"
    ;;
esac
```

printf

```
printf "Hello %s, I'm %s" Sven Olga
#=> "Hello Sven, I'm Olga"
```

```
DIR="${0%/*}"
```

Getting options

```
while [[ "$1" =~ ^- && ! "$1" == "--" ]]; do case $1 in
  -V | --version )
    echo $version
    exit
    ;;
  -s | --string )
    shift; string=$1
    ;;
  -f | --flag )
    flag=1
    ;;
  *)
    ;;
esac; shift; done
if [[ "$1" == '--' ]]; then shift; fi
```

Special variables

\$?	Exit status of last task
\$!	PID of last background task
\$\$	PID of shell
\$0	Filename of the shell script
\$_	Last argument of the previous command
See Special parameters .	

Grep check

```
if grep -q 'foo' ~/.bash_history; then
  echo "You appear to have typed 'foo' in the past"
fi
```

Also see

```
printf "1 + 1 = %d" 2
#=> "1 + 1 = 2"

printf "This is how you print a float: %f" 2
#=> "This is how you print a float: 2.000000"
```

Heredoc

```
cat <<END
hello world
END
```

Reading input

```
echo -n "Proceed? [y/n]: "
read ans
echo $ans
```

```
read -n 1 ans      # Just one character
```

Go to previous directory

```
pwd # /home/user/foo
cd bar/
pwd # /home/user/foo/bar
cd -
pwd # /home/user/foo
```

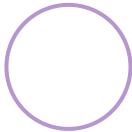

Check for command's result

```
if ping -c 1 google.com; then
  echo "It appears you have a working internet connection"
fi
```
